"Glucose is happy to recommend the outsourcing development services of n-Coding Group. n-Coding Group offered professional and cost effective solution to meet our business needs. GetFit was launched successfully".

Steve Russell
CEO, Glucose UK

Who we are

CONNECTING YOUR BUSINESS TO THE TECHNOLOGY RESOURCES YOU NEED

n-Coding Group is a Professional IT Offshore development company based in Sydney with an office in London and a development Centre in Hefei, Anhui, PR China.

Founded out of Metasource Systems UK and Greater China Technologies, we have market experience in IT outsourcing since 2001 catering for large corporates to medium and small sized firms.

n-Coding Group's business model is aimed at maximising creative designs, management & engineering to achieve cost effective solution. Our culture is based on a new community of global professionalism working hand in hand with customers in real time.

Key to this is having customer services as well as lead developers and project managers from Australasia and the United Kingdom embedded into our development centre in China.

When you work with n-Coding Group, you get the best in both value and commitment. From graphic design through to IT development, we can assist you with all of your IT needs.

"We are driven to provide quality and security while fostering cost savings".

WHY OFFSHORE IT?

- // Re-allocation of resources in core activities
- // Huge monetary benefits
- // Saving most valuable resource -Time
- // Substantial reduction in risk
- // 24 X 7 production process
- // Availability of product-specific expertise
- // Lower service cost & up skill
- // Lack of internal-skilled resources
- // Introduction of your product into new markets
- // Minimise research and development cost

Why us?

n-Coding Group is an Australasian business with firm roots in Asia, UK and North America. We are constantly reaching for new heights in innovation and creativity.

Our strategy ensures 'Best Shoring' practices:

- // Code quality
- // Ensure Cultural synergies
- // Reduce project staff turnover
- // Guard against rising project costs
- // Flexible emergency change support
- // Intellectual property and data protection

Project methodologies and increased communication bandwidth ensure that code produced meets our customer specifications, reduces project delays and keeps our clients' budget low.

We constantly review and train our staff in the latest technologies, approach and standards.

We have practices in place to measure progress and quality in real time. Customer's IP and data is important to us and as a result we have in place IP security & protection procedures.

Communication is key and English is spoken throughout our business. All code is tested stringently before release in accordance with our quality assurance program.

We believe in the AGILE approach and Joint Application Development (JAD). We analyse our clients' requirements thoroughly before undertaking projects.

A key feature that separates n-Coding Group from our competitors is the fact that our clients deal end to end with our local consultants with minimum visibility of our development offshore.

Our development costs typically save our clients up to 60% in development cost, when compared with using local resources.
